

Quick Charger Instructions

LED Off
IMPORTANT!
LED does not turn on until charger is plugged into battery

Make sure power is turned on in wall outlet being used.

Unplug power cord, charger and battery.
Wait 30 seconds.
Reconnect in this order:
1 plug power cord into charger
2 plug power cord into wall outlet
3 plug charger into battery

LED still **does not** turn on. LED turns **solid red.**

Battery is **dead/damaged** and will not accept a charge.

LED Flashing Red

Battery is **dead/damaged** and will not accept a charge.

LED Solid Red

After plugging charger into battery, LED immediately turns **solid red** and then cycles to the appropriate battery status: stays **red**; changes to **flashing green**; changes to **solid green**. This can take up to 15 seconds.

Battery is **charging.**

LED turns **flashing green.**

LED Flashing Green

After about two hours of charging, LED changes to **flashing green**. Battery is about 80% charged.

Battery is ready to be used in your Power Wheels® vehicle.

LED continues **flashing green** for 4 hours until battery is 100% charged.

LED turns **solid green.**

LED Solid Green

After about 6 hours of charging, LED turns **solid green** and battery is 100% charged.

Battery is ready to be used in your Power Wheels® vehicle.
